Program 1

```
Write a JAVA program that checks whether a given string is a palindrome or not
         String read from keyboard
Output: Message displayed
//Palindrome
import java.util.Scanner;
public class Palindrome {
       public static void main( String args[] ) {
               Scanner sc = new Scanner(System.in);
               System.out.println("Enter a string");
               String usrInput = sc.nextLine();
               int len = usrInput.length();
              int flag = 1;
               for(int i=0; i<(len/2); i++) {
                      if( !(usrInput.charAt(i) == usrInput.charAt(len-1-i) ) ) {
                              flag = 0;
                              break;
                      }
              if( flag == 1)
                      System.out.println("This is a palindrome");
               else
                      System.out.println("This is not a palindrome");
       }
```

OUTPUT

```
mec@cc-1-3:~/Mayon/00PS_LAB_JAVA_MEC/Second Lab/build$ java Palindrome
Enter a string
OPPO
This is a palindrome
mec@cc-1-3:~/Mayon/00PS_LAB_JAVA_MEC/Second Lab/build$ java Palindrome
Enter a string
oops
This is not a palindrome
mec@cc-1-3:~/Mayon/00PS_LAB_JAVA_MEC/Second Lab/build$
```

```
Program 2
```

```
Write a Java program to find the frequency of given character in a string.
Input: String read from keyboard
      Character read from keyboard.
Output: Number of occurrences of the character in the string
//CharFrequency
import java.util.Scanner;
public class CharFrequency {
       public static void main( String args[] ) {
               String usrInput;
               char ch;
               int len, freq = 0;
               Scanner sc = new Scanner(System.in);
               System.out.println("Enter a string");
               usrInput = sc.nextLine();
               System.out.println("Enter a character");
               ch = sc.next().charAt(0);
              len = usrInput.length();
               for(int i=0; i<len; i++) {
                      if( ch == usrInput.charAt(i) ) {
                              freq++;
               System.out.println("\"" + ch + "\" Occurs " + freq + " times in : \"" + usrInput + "\" ");
       }
}
```

OUTPUT

```
mec@cc-1-3:~/Mayon/OOPS_LAB_JAVA_MEC/Second Lab/build$ java CharFrequency
Enter a string
This is a good day
Enter a character
"a" Occurs 2 times in : "This is a good day"
mec@cc-1-3:~/Mayon/OOPS_LAB_JAVA_MEC/Second Lab/build$
```

Program 3

```
Write a Java program to multiply two given matrices.
Input: Dimensions of two matrices (MxN, PxQ)
     : If dimensions are suitable for multiplication, read two integer matrices, say A and B
Output: Matrices A, B and C = A*B displayed / Error message
//Matrix Multiplication
import java.util.Scanner;
public class matrixMult {
       public static void main( String args[] ) {
              int m, n, p, q;
